

Increment and Decrement Operators 1 . What is the value of x and y after the following code executes?

```
int x = 5, y;  
y = ++x;
```

a) x = 5, y = 5 b) x = 6, y = 5 c) x = 5, y = 6 d) x = 6, y = 6

answer : d) x = 6, y = 6

2 . What is the value of a and b after the following code executes? C

```
int a = 10, b;  
b = a--;
```

a) a = 10, b = 10 b) a = 9, b = 10 c) a = 10, b = 9 d) a = 9, b = 9

answer : b) a = 9, b = 10

3 . Which of the following is a pre-increment operator? a) i++ b) ++i c) i-- d) --i

answer :b) ++i

4 . If int i = 7;, what is the value of i after i++ is executed?

a) 7 b) 8 c) 6 d) Undefined

answer :b) 8

5 . What will be the output of the following code?

```
int i = 0;  
int x = i++, y = ++i;  
printf("%d %d\n", x, y);
```

a) 0 2 b) 0 1 c) 1 2 d) Undefined

answer :a) 0 2

6 . What is the value of result after the following code?

```
int p = 5, q = 3, result;  
result = ++p * q--;
```

a) result = 15 b) result = 18 c) result = 20 d) result = 24

answer :b)result = 18

7 . Which of the following is a post-decrement operator?

a) i++ b) ++i c) i-- d) --i

answer :c) i--

8 . If int count = 1;, what is the value of count after --count is executed?

a) 1 b) 0 c) -1 d) Undefined

answer :b) 0

9 . What will be the output of the following code?

```
int m = 2;  
printf("%d\n", m++ + ++m);
```

a) 4 b) 5 c) 6 d) 7

answer :c) 6

10 . The increment and decrement operators are. a) Unary operators b) Binary operators c) Ternary operators d) Logical operators

answer :a) Unary operators

11 . Conditional Statements (if, else if, else, switch) Which keyword is used to implement a single-condition decision in C? a) else b) if c) switch d) case

answer :b) if

12 . What will be the output of the following code?

```
int num = 10;  
if (num > 5) {  
    printf("Greater\n");  
}
```

```
}  
printf("Done\n");
```

a) Greater b) Done c) Greater\nDone d) No output

answer : c) Greater\nDone

13 . What will be the output of the following code?

```
int x = 7;  
if (x % 2 == 0) {  
    printf("Even\n");  
} else {  
    printf("Odd\n");  
}
```

a) Even b) Odd c) Even\nOdd d) No output

answer :b) Odd

14 . Which statement is used to handle multiple possible values of a single variable?

a) if-else b) for c) switch d) while

answer :c) switch

15 . What keyword is used to exit a switch case?

a) continue b) return c) break d) exit

answer :c) switch

16 . What will be the output of the following code?

```
int score = 85;  
if (score >= 90) {  
    printf("A\n");  
} else if (score >= 80) {  
    printf("B\n");  
} else {  
    printf("C\n");  
}
```

a) A b) B c) C d) No output

answer :b)B

17 . If no break statement is used in a switch case, what happens?

a) Compiler error b) Runtime error c) Fall-through to the next case d) Program terminates

answer :c) Fall-through to the next case

18 . What is the purpose of the default case in a switch statement?

a) It is executed when no other case matches. b) It is always executed. c) It handles errors. d) It is optional and has no specific purpose.

answer :a) It is executed when no other case matches.

19 . What will be the output of the following code?

```
char grade = 'B';
switch (grade) {
    case 'A': printf("Excellent\n");
    case 'B': printf("Good\n");
    case 'C': printf("Average\n");
    default: printf("Fail\n");
}
```

a) Good b) Good\nAverage\nFail c) Excellent d) Fail

answer :b) Good\nAverage\nFail

20 . Which of the following is a valid conditional expression in C?

a)  $x == y$  b)  $x = y$  c)  $x \&\& y$  d) All of the above

answer : a)  $x == y$  — Convert to pdf
